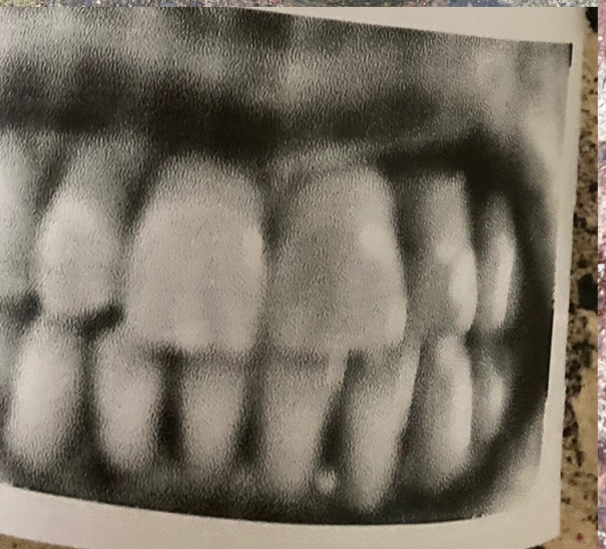
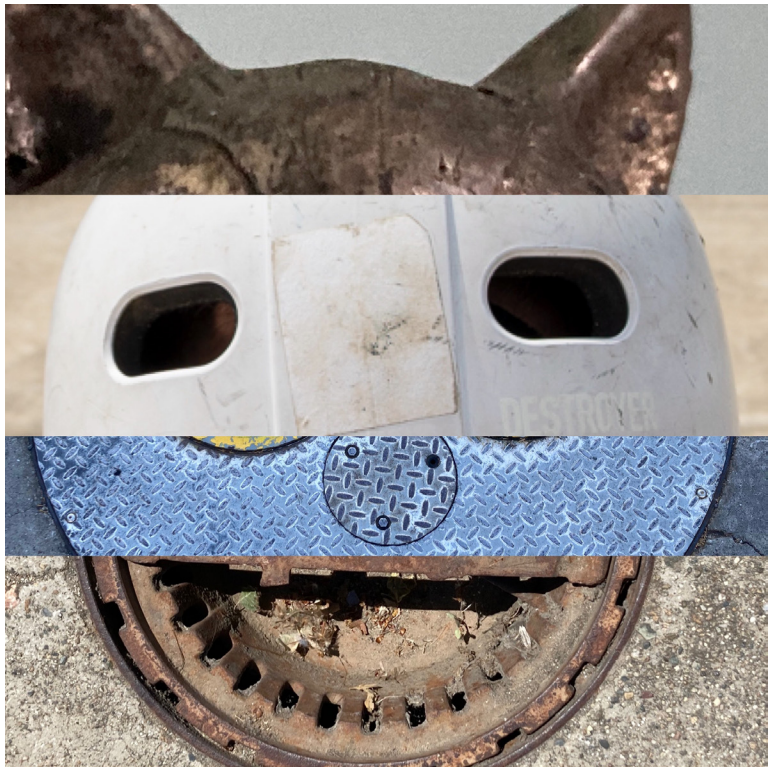
COLLAGED FACES

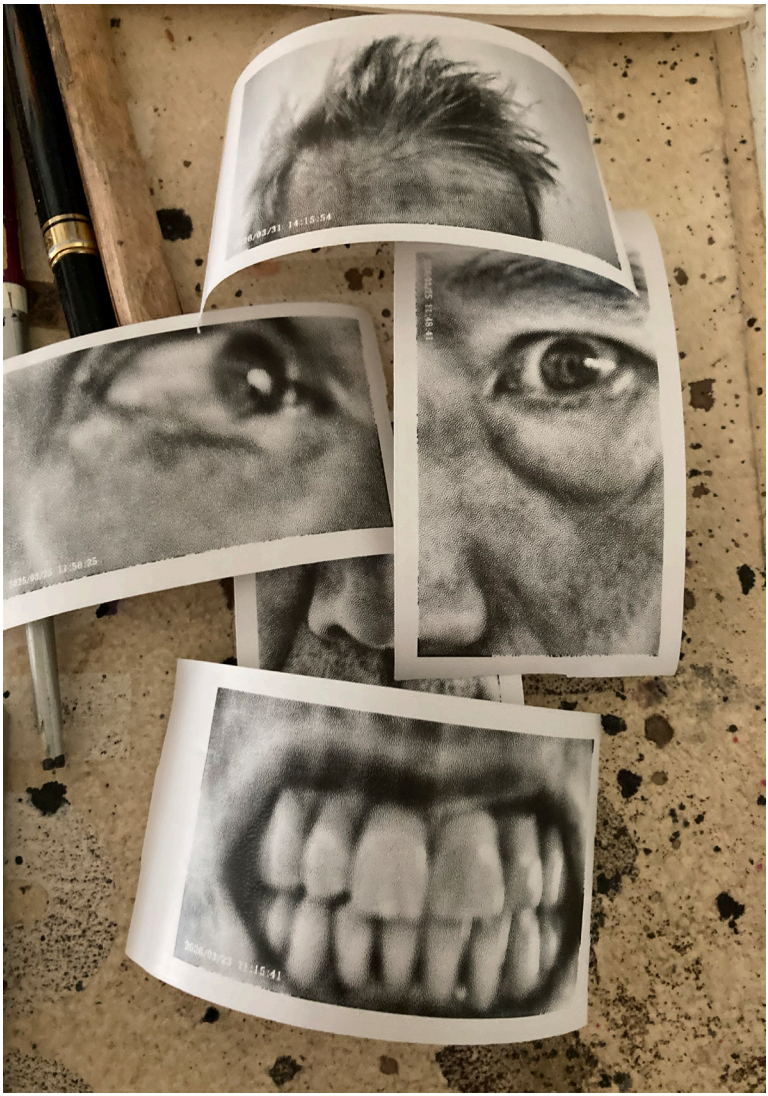
where did the idea come from? the internet of course. watching lovelletters to skateboarding i say a board graphic that used a collaged face and thought i might quickly assemble something similar with instagram's layout app.



I had lots of weird portraits and pareidoli-ac images in my phone I could layout in the simple grid variations provided in the layout software.



An artist on Instagram has been posting some grotesque masks with collaged facial features from magazine photos. I knew I could use real image manipulation software to make something similar.



oh, yeah, i have tried this before.
